What’s New at
Nassau University Medical Center

Emergency Department
Nassau County’s premier Level One Trauma Center is now home to the area’s largest state-of-the-art Emergency Department. After a $36 million renovation, the new Emergency Department features the latest in monitoring and diagnostic technology, including a 320-slice CT scanner. The area’s most talented physicians and nurses provide quality emergent and trauma care in a modern, spacious, private and pleasing environment. The space includes 35 individual patient rooms, and the department has the shortest average waiting times in the county.

Burn Center
Nassau University Medical Center is also home to a new $6.7 million, 12,000-square-foot burn center that is one of the best facilities in the United States. Funded in part by the Nassau County Fire Fighters Burn Center Foundation, the unit can handle up to 10 patients, and includes a four-bed, critical-care unit, a six-bed unit for acute-care and Nassau County’s only multiplace hyperbaric chamber. A compassionate and experienced staff of plastic surgeons, critical care specialists and nurses, all with special expertise in caring for burn victims, uses the very latest techniques and technologies, including synthetic material that serves as a temporary skin substitute, and helps prevent infection — the worst danger for victims of serious burns.

ICU Suites
As part of Nassau University Medical Center’s $200 million modernization program, all of our intensive care suites have been renovated and upgraded to provide the latest technology for monitoring and managing critically ill patients. The complete modernization of our second-floor ICU suite includes a new lobby with elevator access, a waiting area, a family reception area, and all-new SICU, CCU and MICU units.
Modern health care is changing by the minute. At NuHealth, we’re changing to meet the demands of a dynamic and diverse community, where the need for top-quality, yet affordable, health care services has never been greater.

We’re absolutely committed to being the health care institution that makes the full spectrum of world-class services available to all of Nassau County’s residents, from the newborn to our senior citizens, for our families and for our workers, for those who can afford it and for those who cannot.

You already know us as Nassau County’s premier Level One Trauma Center, with over 72,000 visits to our emergency room each year, 22,000 patient admissions, and more than 300,000 ambulatory visits to our hospital and outlying family health centers.

What you may not be aware of is all of the amazing improvements to our facilities and our services that are changing us for the better — changing to make us a leading provider of primary and tertiary care services that rival the best in the country.

Now that many of these improvements are either complete or underway, it’s time you took another look to better serve expectant mothers and their families by adding additional large birthing rooms, each with a water tub for underwater deliveries for low-risk mothers, a new central nursing station, a waiting room and a reception center. These amenities are designed to better serve expectant mothers and their families by creating a calm and relaxed environment.

A message from Victor F. Politi

Cardiac Care Center
Created in partnership with the North Shore-LIJ Health System, the NuHealth Cardiac Care Center is staffed by a team of heart specialists that has the most advanced training in all aspects of cardiac care. They bring an extraordinary level of expertise to those who need it most.

The NuHealth Cardiac Care Center offers a broader array of cardiac services than ever before to Nassau University Medical Center — from advanced therapy for congestive heart failure to catheter, defibrillator and pacemaker implantation. Plans are underway to expand the catheterization services to include emergency Percutaneous Coronary Intervention (PCI) services for treatment of patients suffering from Acute Coronary Syndrome.

Physical Medicine and Rehabilitation Unit
Already recognized for top Press Ganey satisfaction scores and America’s Best Doctors designation, the Department of Physical Medicine and Rehabilitation has recently completed a $2 million renovation — including a 25-bed in-patient acute-care rehab unit — making it the largest and most complete service center of its kind in Nassau County.

The bright and cozy setting includes a modern occupational therapy suite, as well as a simulated living space that comes complete with a full kitchen and bedroom. It’s designed to help patients get back to full function before they go home.

Maternity and Newborn Center
The brand-new labor and delivery suites are the culmination of a four-phase renovation of the Maternity and Newborn Center at Nassau University Medical Center. The new center includes seven new labor and delivery suites, two additional large birthing rooms, each with a water tub for underwater deliveries for low-risk mothers, a new central nursing station, a waiting room and a reception center. These amenities are designed to better serve expectant mothers and their families by creating a calm and relaxed environment.

Hypertension, Diabetes and Vascular Care Center
The Zaki Hossain Center for Hypertension, Diabetes & Vascular Disease at Nassau University Medical Center was created to help prevent, diagnose, monitor and treat these diseases as interrelated parts of a complex medical puzzle. The Center services patients on a beautifully renovated floor, and is designed to encourage collaborative care. A multidisciplinary team of clinicians, including endocrinologists, podiatrists, weight-loss and wound-care specialists works together to address the management of these often interconnected diseases. When problem wounds become a threat to life and limb, the wound-care specialists at NuHealth’s Wound Care & Hyperbaric Oxygen Treatment Center are ready with the latest in sophisticated healing technologies.

Oncology Division
NuHealth’s radiation oncologists at Nassau University Medical Center offer hope and healing to patients who have been diagnosed with cancer. The newly renovated unit provides a warm, relaxed atmosphere for patients and families. A full range of cancer treatments is provided by skilled cancer professionals, who deliver advanced oncology care using the latest technology, including Siemens 6/23 dual-energy linear accelerator with electrons, and a sophisticated Philips 3D-planning system that enables extraordinarily precise Intensity Modulated Radiation Therapy.

Soon to Open
Primary Care Center
In the very near future, our first floor will open the NuHealth Nassau University Primary Care Center. The center will provide local families and businesses with easy and fast access to urgent and primary care services supported by the hospital’s extensive diagnostic and specialty services. Prescriptions written by our primary care providers can be filled in the Walgreen’s Pharmacy located in the Nassau University Medical Center lobby.
