Nassau University Medical Center
Internal Medicine Training Program

Goals of the Program

- To train our residents to become capable internists and future leaders in Medicine

- To teach the practice of medicine in a milieu containing people from different cultural and economic backgrounds.

- To instill a high degree of Professionalism and sound ethical principles

- To provide our trainees with the clinical experiences and didactic teaching necessary to prepare them for their future – whether as primary care physicians or sub-specialists, academicians or practitioners.

Dialysis patient review - Patients on dialysis who are in-patients and/or are having specific medical, social or psychiatric problems are presented and discussed on a weekly basis. This is a multidisciplinary approach inclusive of nursing, social services, dietary and physicians.

Clinical Case Conference - interesting cases of the past week from the consult service are presented and discussed. Invariably this includes a literature review of the topic or a specific point. All components of the team –attending, fellow, resident and medical student- contribute to the presentation.

Friday clinical review - different clinical topic is reviewed weekly and updated at length. All the fellows participate and take equal turns in presenting.

Biostatistics Course - a 10 hour lecture series on biostatistics, epidemiology and evidence based medicine is provided annually.

Guest lecture Series - Monthly lecture by a distinguished outside speaker. Discussions involve a clinical or research topic.
I. HOUSESTAFF EVALUATION AND FEEDBACK TO THE FACULTY:

After each of their rotation, the attending physician evaluates the house staff. A feedback is given to them and constructive suggestions are made for the improvement of any deficiencies noted. The residents, in turn, evaluate the various aspects of the rotation and the performance of the attendings. The residents evaluate the didactic lectures by completing a form at the end of each lecture. Their answers are analyzed at the end of the course and improvements are made for the next course, based on their comments and suggestions. The division reviews the results of the National In-Training Examination in order to assess the knowledge base of the residency as a whole.

NOON CONFERENCE

- Lectures as a part of core curriculum series are given to the house staff annually.

MORBIDITY AND MORTALITY CONFERENCES

- Division participates in the M&M conferences both at Nassau University Medical Center and Winthrop University Hospital

Osteopathic Internal Medicine Residency Program

Program Director: Kenneth J. Steier, DO, MPH, MHA

In addition to the ACGME Program Requirements, all graduates of Osteopathic Medical Schools are required to;

1) Complete all requirements of the ACOI and AOA, including required rotations and procedures.
2) Demonstrate proficiency in Osteopathic Principles and Practice
3) Integrate Osteopathic Manipulative Therapy into their practice
4) Attend the Annual ACOI Convention at least once during their residency
5) Take the AOBIM certification exam at the completion of the residency
6) Take the annual AOBIM In-training exam
7) Complete the Resident Patient Evaluation
8) Complete at least one osteopathic-related research project during the residency.
